DRAFT

SUBJECT: Warring and Sons Site Field Investigation

From: Bob Mason, Environmental Protection Specialist  
Stephany Del Re, Environmental ~~Specialist~~ *SCIENTIST*  
Hazardous Waste Site Control Branch (WH-548)

To: Harlan Agnew, Attorney  
Hazardous Waste Enforcement Task Force (EN-335)

As requested, we are forwarding the following list of suggestions for additional sample extraction location points at the Warring and Sons Drum Facility in Washington, DC. It is our understanding that these samples will be obtained by Region III field investigations.

1. Samples of residue from within Point D (see attachments)
2. Sample of storm drains in Point B
3. Samples of any runoff in Point E
4. Samples of residue from within Point H
5. Any visible surface runoff into adjacent storm drains
6. Samples of residue within Points Q & K (including storm drains)

We believe that attaining samples from these points will more adequately determine the true level of hazard posed by the Warring site(s).

In addition, we would like to make the following suggestions regarding field activities at the Warring Site.

1. No prior notification of the scheduled site visit given to Mr. Warring. This will allow investigation to have a better chance of observing actual operating procedures.
2. If Mr. Warring refuses entry to any sections of his facility, a warrant should be obtained immediately.

3. Every attempt should be made to obtain the records of the Warring facility.
4. That we accompany Region III investigators during the site visit to improve our skills and be of possible assistance.

It is our opinion that EPA must respond to this site or it will not be adequately dealt with. This site has been ignored due to its location, thus subjecting residents to economic discrimination. Were this site located in northwest Washington, it would have been cleaned up and relocated years ago.

We truly hope that appropriate actions will be taken to mitigate the level of hazard at this site. Thanks for your effort and concern.
